Subject: Request for SERAS statistical support

Statistical support is requested from the US EPA's Environmental Response Team's (ERT) Scientific Engineering Response Analytical Services (SERAS) Contract to support Region 6's emergency operations center (EOC) during the Hurricane Harvey Response. The support is requested to perform statistical comparison of pre- and post- soil sampling at orphan drum, white goods, and household hazardous waste collection pads. Additional sample results - statistical evaluations may be requested as warranted by the Response's Environmental Unit.

Thank you
